cell biology by cooper pdf - The
cell (from Latin cella, meaning
"small room") is the basic
structural, functional, and
biological unit of all known living
organisms. A cell is the smallest
unit of life.

Cell (biology) - Wikipedia - On the cover: Stem
Cell Metabolism. Human
pluripotent stem cells rely on
glycolysis for energy and biomass
production. On pp. 663-674 of
this issue, Tohyama et al. show
that human ESCs/iPSCs can also
utilize glutamine to generate ATP
and, in contrast to differentiated
cardiomyocytes, are unable to use
pyruvate as a fuel.

Issue: Biophysical Journal - Cell -
The cell membrane consists of
three classes of amphipathic
lipids: phospholipids, glycolipids,
and sterols. The amount of each
depends upon the type of cell, but
in the majority of cases

phospholipids are the most
abundant, often contributing for
over 50% of all lipids in plasma
membranes.
Fri, 13 Apr 2018 09:15:00 GMT
Cell membrane - Wikipedia - In addition to
chemicals and radiation, another
source of mutation is
viruses. Viruses are very small
'organisms' that can infect the
cells of other animals or plants.
Humans are susceptible to a large
number of different viruses.
