Value-Range Analysis of C
Programs describes a static
analysis for detecting buffer
overflows. A buffer overflow in a
C program occurs when input is
read into a memory buffer whose
length exceeds that of the buffer.

Analysis... | In 1988, Robert T.
Morris exploited a so-called
buffer-overflow bug in finger (a
dæmon whose job it is to return
information on local users) to
mount a denial-of-service attack
on hundreds of VAX and Sun-3
computers [159]. Sun, 08 Apr
